

# Polynomial Expansions of Analytic Functions

By Ralph P. Boas

Springer-Verlag Berlin and Heidelberg GmbH & Co. K. Paperback. Book Condition: New. Paperback. 77 pages. Dimensions: 9.2in. x 6.1in. x 0.2in. This monograph deals with the expansion properties, in the complex domain, of sets of polynomials which are defined by generating relations. It thus represents a synthesis of two branches of analysis which have been developing almost independently. On the one hand there has grown up a body of results dealing with the more or less formal properties of sets of polynomials which possess simple generating relations. Much of this material is summarized in the Bateman compendia (ERDELYI 1, voi. III, chap. 19) and in TRUESDELL 1. On the other hand, a problem of fundamental interest in classical analysis is to study the representability of an analytic function  $f(z)$  as a series  $\sum c_n p_n(z)$ , where  $p_n$  is a prescribed sequence of functions, and the connections between the function  $f$  and the coefficients  $c_n$ . BIEBERBACH's monograph *Analytische Fortsetzung* (Ergebnisse der Mathematik, new series, no. 3) can be regarded as a study of this problem for the special choice  $p_n(z) = z^n$ , and illustrates the depth and detail which such a specialization...

## Reviews

*It becomes an amazing pdf which i actually have at any time read through. This can be for all those who statte there had not been a worthy of reading through. You wont sense monotony at anytime of your own time (that's what catalogues are for relating to should you check with me).*

-- **Claud Kris**

*If you need to adding benefit, a must buy book. It is writter in easy words and phrases and not difficult to understand. Your daily life span is going to be transform when you complete reading this article publication.*

-- **Ricky Leannon**
